Aesthetic characteristics

Detached house in the north of Spain designed by the architect Pedro del Llano. It is a new construction with a marked modern architecture. The kitchen is directly connected to the dining room although it can remain independent thanks to a sliding door which, depending on the needs of the user, can separate the two ambiances.

The white colour, predominant in the interior of the house and in the kitchen, helps create a serene, bright and balanced ambience as well as contributing to reinforce the importance of the Iroko wood floor with an extra matt finish.

Architecture

An island distribution with no wall units has been chosen. As a result, the views are preserved and natural light can enter the kitchen helping merge the exterior with the interior.

The large island which organises the space, arranges the work and permits fluid movements, is the main attraction of this kitchen. Apart from containing the washing and cooking areas it has an ample and comfortable space for storing and preparing food.

The worktop is extended on one side of the island and acts as a practical kitchen office for breakfast, light lunches or reunions with friends. Thanks to this the owners, apart from being able to enjoy cooking, do not have to forsake the company of family or guests, who can always participate in the preparation and tasting of the food.

An up to the ceiling tall unit area is installed parallel to the island and contains the oven, coffee machine, hotplate, fridge and freezer. It also has a unit with a coplanar sliding door system that offers an additional work area with plugs and a lighting system.

Highlights

In this project, the architect has constantly searched for a direct connection with the exterior of the home. The house is situated in a rural, agricultural area which changes its appearance and colours depending on the season. Each one of the windows is converted into a large painting which is always changing, passing from the green colours of spring to the ochre and brown colours of autumn. Having such beauty outside, the interior does not need heavily adorned furniture or elements that may distract the attention.

The kitchen follows the same philosophy as the rest of the house; it is a tribute to discretion. Hence the selection of Santos' Intra model, a unique design resulting from the wish to offer innovative products. This new system combines three basic aspects of kitchen design: innovation, design and quality.

Trendsetting aesthetic solutions

The total absence of a handle is one of the main characteristics of the Intra model. To make it possible, Santos has developed an innovative opening system where the units' profile is adapted so it acts as a handle. An opening system whose exclusivity has been protected by a Utility Model.

Apart from its unquestionable functional characteristics the Intra model stands out for its aesthetic qualities. It is a model with smooth fronts that does not need a traditional handle and thus permits the integration of the furniture with the room's architecture.

Tall unit area: more solutions in less space

Keeping food and crockery perfectly organised and easily accessible is essential for working comfortably in the kitchen. There are many storage solutions but the key is the units' versatility and functionality.

Santos' coplanar sliding door system allows the doors to fully open providing greater visibility and easier access to the interior of the unit. Once they are closed, they line up perfectly, helping to achieve an optimum aesthetical appearance.

The interior is equipped with wooden grill shelves made from beech with an optional glass surface that makes it possible to store elements with a small base without them falling over.

It also includes an additional work area with plugs and a lighting system that make it possible to use small electrical appliances without having to move them.

The lower part of the unit contains wooden drawers which help keep things tidy and enable the storage of food and other objects that are used on a daily basis in the kitchen.
