Aesthetic characteristics

Contrasts that add charm: naked lines wrapped up by the warmth of the laricio engraved front joins with the lightness of the white glass. Modernity and tradition sharing the same roof, mixing to give each corner of the house that personality that makes it a home.

Architecture

The distribution of the kitchen in a "U", apart from facilitating the work by achieving that everything is only a step away, allows us to count with a peninsula that we can depend on as an additional preparation space or as a table where we can comfortably enjoy a meal without having to go to the dining room.

Highlights

The work space and the correct lighting are aspects that affect the comfort level in a kitchen. In this case, the full potential is gained from both.

The preparation area is equipped with a lighting profile that, apart from providing the light needed for working, has electrical sockets for small electrical appliances and a canal for equipment in which you can place various accessories.

Apart from its functionality this profile gives us interesting aesthetic solutions, allowing the extractable hood to be integrated in the wall unit area once closed, maintaining the uniformity.

The most frequently used utensils are found together in spacious 60 cm deep drawers that are able to support unto 65 kg weight and are equipped with extractable accessories made in natural wood.

Functionality and beauty

The world changes and so do people, tastes and needs, but not the wish to make the most of our time. The kitchen is one of the places that occupies most of our time, but also one that can give you more in return. This is why in the kitchen, perhaps more than in any other room, the solution is to find a balance: what is functional is beautiful and what is beautiful is functional.

Unlike other systems, beauty and functionality are both found in the MINOS series: its concealed handle does not decrease storage capacity. To achieve this, we put a profile at the top and a recess in the middle drawer. The MINOS series comes with a multitude of finishes, including Engraved Laricio.

Multiple solutions in one space

The design of the Santos roller-shutter units makes these cabinets perfect for storing small electrical appliances. They are always installed on top of base units, thus ensuring a coordinated storage area. If a block of tall units is installed then we will have a complementary work surface.

The Santos roller-shutter units are almost entirely handcrafted, making them unique within the kitchen furniture market, not only because of the way they are manufactured but also because of the top quality materials used.

The interior of the roller-shutter unit, apart from offering an additional workspace, has electrical sockets and its own lighting that makes it possible to use small electrical appliances without having to move them.

Apart from its functionality this profile gives us interesting aesthetic solutions, allowing the extractable hood to be integrated in the wall unit area once closed, maintaining the uniformity.

Wine rack accessory: the wine cellar in a drawer

It is no secret that the wine culture has an increasing number of followers.

The bottle holder accessory developed by Santos, made in marine board and thought of to equip the drawers, responds to the growing need to have an adequate place to store bottles, even in those houses that, due to lack of space, don't have a wine cellar.

Multifunction trolley

Every good host aims to achieve the full satisfaction of his/her guests endeavouring that they have pleasant memories of their visit.

Even if we have a large comfortable kitchen we prefer for them to enjoy the food we have prepared in another room of the house.

On these occasions the multi-function cart, made in aluminium and beech wood, is a tool that is lightweight, practical and elegant in which we can take the food and crockery from the kitchen to the dining room or living room.
