Aesthetic characteristics

Family country home. The landscape and the owners' personality define the distinct character of the project.

Architecture

The peninsula separates the preparation and work area from the dining area, differentiating the two ambiances but, at the same time, maintaining them open and communicated. The grey fronts offer a balance between the kitchen and the tea-wood floor.

Two very important solutions for making the most of the tall unit area in a kitchen are the storage units, in all their varieties, and the units for the electrical appliances.

Highlights

Styles, tastes and preferences change with time. Nevertheless, there are some designs that, conveniently updated, resist changes in trends and fashions.

With the ÉPOCA model, the harmony and equilibrium of a classical design is complemented with interior equipment designed to meet today's day-to-day needs.

The roller shutter unit: an excellent solution

Nowadays, a kitchen is not conceived as an independent work area but as a place which coexists with other rooms in the home. Bearing this in mind, the roller shutter unit is an excellent solution as apart from making the most of corners that are difficult to reach, it allows us to store away different elements that would otherwise be seen.

The interior of the roller-shutter unit, apart from offering an additional workspace, has electrical sockets and its own lighting that makes it possible to use small electrical appliances without having to move them.

The design of the Santos roller-shutter units makes these cabinets perfect for storing small electrical appliances. They are always installed on top of base units, thus ensuring a coordinated storage area.

The Santos roller-shutter units are almost entirely handcrafted, making them unique within the kitchen furniture market, not only because of the way they are manufactured but also because of the top quality materials used.
