## Aesthetic characteristics

When we leave behind a stage in our life automatically another one with new hopes and illusions starts. Without a doubt, a good way to start to enjoy it is renovating those spaces in which we spend a lot of our time by creating ambiances that fit the new possibilities that we can see on the horizon.

## Architecture

A L-shaped kitchen with two well defined areas

The washing and cooking mono-block. This area is solved in a space 360 cm by 67,5 cm. The wall area is reserved for the kitchen hood and storage. All furniture fronts have folded open and are made of white glass.

The column area: where we integrate electrical appliances: fridge and oven.

## Highlights

Santos always looks to achieve maximum functionality without forgetting the aesthetics. The solutions applied to the integration of electrical appliances in the kitchen are a clear example of this.

The tall unit area has a discrete ventilation system that contributes to the correct functioning of the fridge and prolongs its lifetime. The extractable hood is integrated in the lighting profile once it is closed giving a unified look and also aiding the cleaning of this area.

Achieving beauty with the minimum elements: the assisted opening system makes the absence of handles possible, conceding all the prominence of the front to the harmony of the lines and the stone grey finish.

## SAA. Assisted opening system

Often, while working in the kitchen we realise that we need to open a drawer but our hands are occupied... Who hasn't seen themselves in such a situation?

The assisted opening system (SAA) is thought of to facilitate access to the drawer interiors, even those that have a heavier load: with the SAA it you no longer have to make an effort to pull because with a brief touch the drawer opens smoothly.

Anyone, no matter their age or physical capacity, can benefit from the horizontal projection proposed by Santos.

Handle less kitchens have the advantage that they are easier to maintain because they don't have external elements that make cleaning more difficult.

### Folding door system

Folding doors allow us working with nothing in our way, even when units are open. Además, facilita el acceso a su interior, donde los estantes de vidrio permiten tenerlo todo al alcance de la vista, incluso en las baldas más elevadas.

Besides, this system makes access to the interior of the unit easier. With glass shelves we have all in sight.

### Sink unit with an interior drawer

In the kitchen, solutions adapted to the user's needs are always appreciated. Santos offers a wide variety of sink units in horizontal and vertical formats offering various options for distribution, waste classification and an optimum interior organisation.

The sink unit equipped with an inner drawer manages to organise four waste bins and the cleaning utensils in just 60 cm.

The parts of the sink unit that are most likely to come into contact with water are built with laminated marine board as standard, a material that is very resistant to humidity, detergents and wear. If the user wishes, it is possible to build the whole unit in this material.

### Ventilation system

Santos always looks to achieve maximum functionality without forgetting the aesthetics. The solutions applied to the integration of electrical appliances in the kitchen are a clear example of this.

The tall unit area has a discrete ventilation system that contributes to the correct functioning of the fridge and prolongs its lifetime.
